

**COAL—WONDERFUL COAL!****COAL DISTILLATION IS DOING TO WIN THE WAR.**

(By "CRAZIER.")

(Continued from our last issue.)

**E ROYAL FLYING CORPS LOVER. COAL.**

A flying airmen like to feel that the enemy does his war with holes, and yet the fabric of a coal is full of holes, and the hole is the air. His particular friend—a derivative of tar—has been used for many years now, and this derivative and other substances, known as tar, will neither rot nor rip. His airmen are safe in their aircraft because the aeroplane must be weather-proof. Ammonia is the standard for the producer. Ammonia from other factories is made by the same process.

Bone factories produce it, but the bulk out of the world is produced by gas works. The coal may be, and indeed is, broken at the gas works plant if not wasted; gas is run through the coal to make it burn, and the place of petrol. The gas bags are unashamedly left hanging for the birds to peck at. See some photographs of the present position of the chief objects of the Flying Corps. One not mentioned is the well-known developer, pyroxylin, and also ammonium nitrobenzoate and vitriol, which are the secret of the Royal Flying Corps' success.

Ice is necessary for hospitals, to save lives, and for the refrigeration of foodstuffs, largely provided by bone factories. They do not do so much for food. Bonefurnaces find ice too expensive, and leave the work. The huge refrigerators at the docks have been converted into hospitals, and we keep fresh and free from disease, are to a mindless public, a great service. The greases are used for clothing. The grease is recovered.

Ladies use it in the shape of cosmetics, candles, and so on. Coal-tar, which has long been used is quite likely to have been derived from oil. At one time, long ago, a new scent was introduced, and it was called "tar." It had a beautiful bouquet.

After a time, however, it was found that it fell into disuse, but it is still made and used as the foundation for many excellent and interesting articles. Coal-tar soap, for instance, could not be built without steel, iron, or copper, and the layers of iron would crush it. It is made from fine coal almost dust, at one time, and is used for various purposes, such as resins and reduced to coke. It is known as "tar" and is used for coal-tar.

The prices which will be given are as follows:

**WASTE PAPER WANTED****IMPORTANT NOTICE****TO OUR READERS.**

We would draw our readers' attention to the urgent necessity for saving every available scrap of waste paper of all sorts, old newspapers, account books, and letters, and any envelopes and other waste, so that it may be returned to the paper mills and made up to do service again. To help meet the emergency, we have made arrangements for collecting waste paper of all sorts and descriptions, small or large quantities, for delivery.

**A FAIR PRICE WILL BE PAID.**

Will our readers, therefore, save their old newspapers, and bed newspaper, circulars, etc., and turn out their cupboard drawers and boxes for our collector, so that they may be made to do good service again? If they have anything of the kind to dispose of, we kindly send a post-card to

**THE WINBLEDON WASTE MATERIALS CO., LTD., NINETEEN ROAD, WIMBLEDON,**

who are acting for us, and the paper will be collected without delay. We will pay a fair price for your waste paper, and you will be assured of a good service again.

If they would like to receive paper here, we cannot undertake to receive paper here, but we can assure them that we will do so.

The prices which will be given are as follows:

CLEAN NEWSPAPERS	1d.
BEDDING AND GOOD ACCOUNT	1d.
BOOKS (with covers)	1d.
OLD PRINTED BOOKS, MAGAZINES, TRADE JOURNALS, ETC., ETC.	1d.
LETTERS, TELEGRAMS, INVOICES, CIRCULARS, EXCELSIOR, BOOKS, ETC.	1d.
MIXED OR UNSORTED PRIVATE HOUSE AND OFFICE WASTE (Wrapping Paper, Crushed News-Papers, Card, etc.)	1d.
	Or 5d. cwt.

Continued from Previous Column.

**THE MONOPOLY OF DYES.**

Without tar, very few dyes can be made. Almost all the dyes are made from coal-tar, and this is, by a process almost similar to gasworks, or, therefore, almost, if not quite, as important, than the manufacture of coal-tar itself. Otherwise the layers of iron ore would crush it.

It is made from fine coal almost dust, at one time, long ago, a new scent was introduced, and it was called "tar." It had a beautiful bouquet.

After a time, however, it was found that it fell into disuse, but it is still made and used as the foundation for many excellent and interesting articles.

Here we have a great advantage over him, without a special permit, still enjoy a cycle.

Gas is required for the production of the country, which we cannot export our tar and benzene to Germany in the same way as we did our coal. Benzene is, however, almost as important as tar, provided the solvent. One has heard of the benzene in the motor car, but benzene is also found in the coal-tar.

Observe the market name "solvent naphtha," because it is made of rubber.

It is used to dissolve latex, and is used at soap factories, and is also used to remove the wax.

It is also used for dyes and high explosives.

We must maintain.

**THE MASTERY OF THE AIR.**

and, short of the use of oil, we can only depend upon the imports of coal-tar.

The household will shortly have to decide what amount of the coal allowance he or she will make for gas and electricity, as well as food.
